IN presenting this catalogue, our purpose is to show only a small variety of designs of Entrance Gates, Railings, Marquise, etc., which may serve as suggestions, while at the same time our price list will give full data in regard to costs, dimensions, etc.

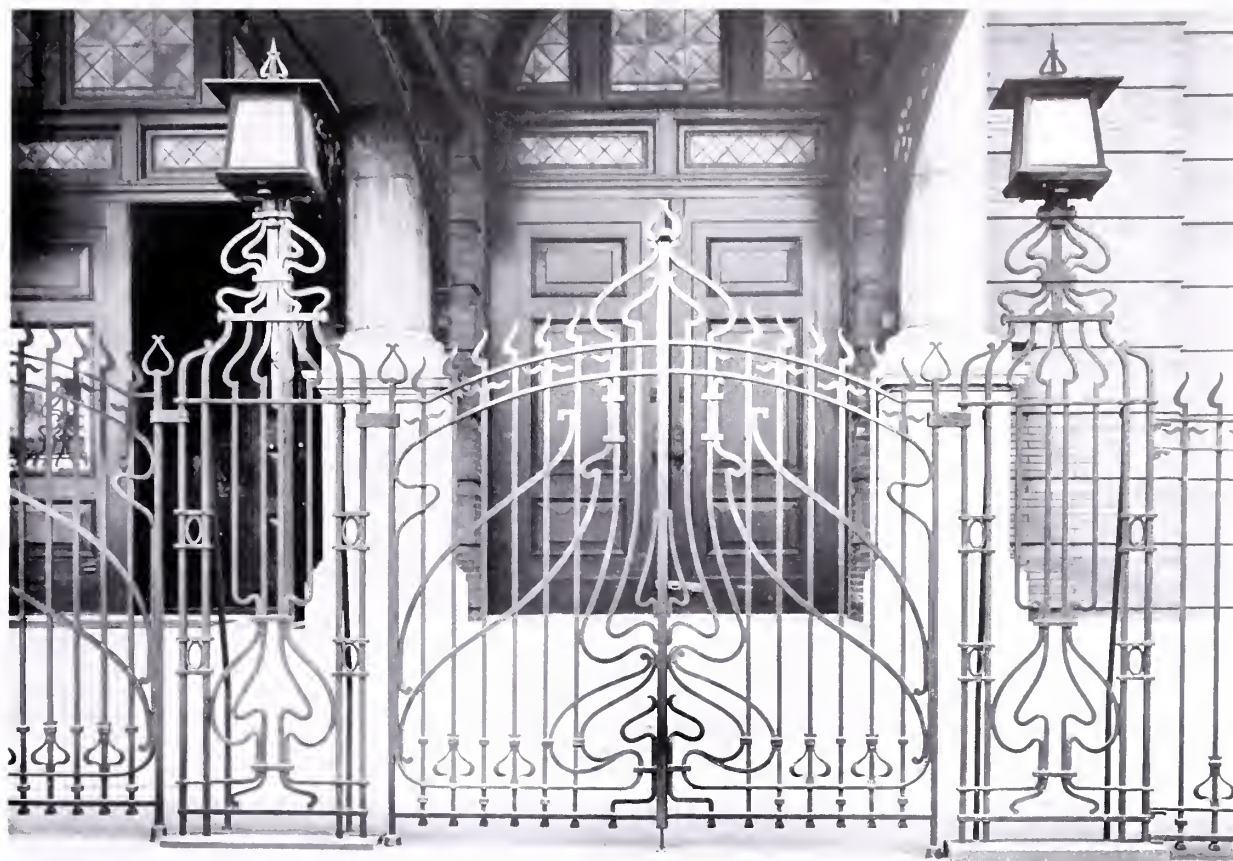

The various designs illustrated are of proportions generally used in work of this character, but the dimensions may be varied to suit local conditions without materially affecting the design.

Decorative metal work of this character is always constructed to suit local conditions and in many cases to harmonize with the architecture of the surrounding buildings.

We wish our customers to know our Designing Department is always at their service and it will be found more satisfactory wherever possible to have us submit suitable and appropriate designs of Entrance Gates, Railings, etc., to be in harmony with the surroundings.
